It currently the consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as truns of N, but the exact sizes of the apps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10797 TCTCTAAAATCCCCAAATTTTTCATAAAC 10825

Direct submission

Submitted (05-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Jun 26, 2000 this sequence version replaced gi:865345.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amme. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL: Sw.; SWISSPROT; Tr:, TREMBL: Wp:, WORNPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping http://www.sanger.ac.uk/RIGP/Chic and at found at http://www.sanger.ac.uk/RIGP/Chic and at found at http://www.sanger.ac.uk/RIGP/Chic and at found at http://www.sanger.ac.uk/RIGP/Chic and a found at a found at http://www.sanger.ac.uk/RIGP/Chic and a found at http://www.sanger.a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

                                                                products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                720

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                      RK;

The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

for treating hereditary hemochromatosis in a patient, and as a metal chelation agent alleviating iron overload . XX
PS Disclosure; Fig 3; 108pp; English.

XX
CC The present invention relates to hereditary hemochromatosis gene couches. These proteins may be used to treat a patient diagnosed as products. These proteins may be used to treat a patient diagnosed as comparing human hemochromatosis disease. It is also useful as a metal concellation agent or as a T-cell differentiation factor, and for chelation agent or as a T-cell differentiation factor, and for the concellation agent or an expect of the concellation agent of the concellation agent of the concellation and the concellation agent of the concellation age
```

This genomic DNA sequence corresponds to the human gene whose mutated form is associated with hereditary haemochromatosis (HH).

To identify this novel gene, allelic association patterns were determined between known markers and the HH locus in the HHA region of chromosome 6. A physical clone coverage was then generated certending from D6S265, which is a marker that is centromeric of HLA-A, in a telomeric direction through D6S276, a marker at which the allelic association was no longer observed. A single mutation of (24d1) in the HH gene appears responsible for the majority of HH disease. This comprises a G to A substitution that is present in 68% of affected chromosomes and in 4% of unaffected chromosomes.

It results in a Cys to Tyr substitution in the encoded protein (see AAW36499) at a critical disulphide bridge important for secondary structure. The following are claimed: the HH genomic DNA (1), a 1437 bp cDNA sequence (Ia) (see AAT96691) and their 24d1, 24d2 and 24d7), or a peptide of at least 56 amino acid contact chosen from the HH gene product, its variants (24d1, 24d2 and 24d7), or a peptide of at least 56 amino acid contactions an antibody produced using the peptide; a method contaction, an animal model for the HH disease, metal chelation contaction, an animal model for the HH disease, metal chelation contaction with HH disease; an ethicactic agents for the mitigation of injury due to oxidative process in vivo or the mitigation of inconverload; a method for screening potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

The present sequence represents the human histocompatibility iron loading (HFE) gene. The HFE gene is a major histocompatibility (MHC) non-classical class I gene located on chromosome 6p. Mutations in the gene lead to iron disorders. The specification describes a method for diagnosing an iron disorder or a genetic susceptibility to develop the absorder in a mammal. The method comprises determining the presence of a mutation in exon 2 or an intron of a HFE gene or protein. The mutation is not a C to G missense mutation at nucleotide 187 of the sequence given in A96769 (Genbank Accession number U60319). The presence of the mutation indicates the disorder or the genetic susceptibility to the disorder. The method is used to diagnose an iron disorder e.g. haemochromatosis, or a genetic susceptibility to develop it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Diagnosing an iron disorder e.g. hemochromatosis or a genetic susceptibility to develop it, by determining the presence of a mutation in exon 2 or an intron of a histocompatibility iron loading nucleic acid -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3383 A; 2474 C; 2911 G; 3378 T; 0 other;

The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis subregion from an hereditary haemochromatosis subregion from an hereditary haemochromatosis with a presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising:

Cap providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of the haplotype genotype indicates the likely presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present protein butyrophilin (FF), and can be used in the production of agonists of and antagonists of BY function. Also described are: (1) a RoRet gene which are homologues of the milk products for use in the broadces for the study, diagnosis and treatment of lugues and Slogren's syndrome; and (2) NFT3 and can can be used to develop products for the study, diagnosis and treatment of lugues and Slogren's syndrome; and (2) NFT3 and can can be used to develop products for the study, diagnosis and can be used to develop products for the study, also which are homologues of a type 1 sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bovine butyrophilin; BT; human hereditary haemochromatosis; HFE; diagnosis; iron metabolism; NPT3; NPT4; RORet; BTF1; BTF2; BTF3; BTF4; BTF5; milk protein; lupus; Sjogren's syndrome; hypophosphatemia;

Isolated polypeptide for treating, preventing and or prognosin disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis

English. Listing; Sequence + NO 3112; 781pp SEQ ID Example 2;

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antisqualists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and prevention of: (a) cancer, e.g. breast and ovarian cancer and coher cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune tract, liver, lung, or urogenital; (b) immune concerns of sisease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple scalerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as mycoradial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. parasitic infections.

The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising:

CC (a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of the haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present products for use in the diagnosis and treatment of HFE. The present invention also describes BFF genes, which are homologues of the milk and antagonists of BF function. Also described are: (1) a ROREt gene which can be used to develop products for the study, diagnosis and treatment of lugus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
